### Post-Operative Nail Procedure Instructions (Dr. Mehler)

1. You have just had a surgical procedure performed.
2. Leave the dressing intact and keep it dry. If you accidentally get the bandage wet, change it immediately with sterile gauze; otherwise, leave this bandage intact!
3. You should not see any bleeding thru the dressing! Some spotting may occur. However, if the dressing gets red with wet blood, it may need to be changed. Please contact our office.
4. You should not experience any severe pain postoperatively. If there is any discomfort, you may take Tylenol or aspirin as directed.
5. If you have any other problems whatsoever, contact us immediately.
